

TITLE: EMPLOYEE ATTRITION PROJECT

INTRODUCTION:

The dataset is taken from Atlas Labs. It contains detailed information about the present as well as former employees of the company. I have used the data to perform analysis in SQL to find out how certain factors affect the reason why people quit the company. It would help in understanding if there are any patterns in the attrition and if the company can make any changes to better their work environment.

OBJECTIVES:

Impact of the following on the attrition rate

1. Age and company loyalty
2. Salary range in the different departments
3. Slow promotion and how it relates to gender
4. Environment consciousness and distance travelled for work

TECH STACK USED:

- SQL (for analysis)
- EXCEL (for visualization)

CONCLUSION:

The overview, insights and recommendations have been organized in a powerpoint presentation with added visual aids.
